# 1 Package *fabio*

## 1.1 Modules

- **GEimage** (*Section 2, p. 7*)
- **GEimage\_old**: Reads the header from a GE a-Si Angio Detector  
(*Section 3, p. 9*)
- **HiPiCimage**: Authors: Henning O.  
(*Section 4, p. 11*)
- **OXDimage**: Reads Oxford Diffraction Sapphire 3 images  
(*Section 5, p. 13*)
- **adscimage**:  
Authors: Henning O.  
(*Section 6, p. 15*)
- **bruker100image** (*Section 7, p. 17*)
- **brukerimage**:  
Authors: Henning O.  
(*Section 8, p. 19*)
- **cbfimage**: Authors: Jérôme Kieffer, ESRF email:jerome.kieffer@esrf.fr  
(*Section 9, p. 21*)
- **datIO**: Authors: Henning O.  
(*Section 10, p. 27*)
- **dm3image**: Authors: Henning O.  
(*Section 11, p. 29*)
- **edfimage**:  
License: GPLv2+  
(*Section 12, p. 31*)
- **fabian\_mar\_header**: This is the mar header interpreter from Fabian by HOS and EK.  
(*Section 13, p. 38*)
- **fabioimage**:  
Authors: Henning O.  
(*Section 14, p. 39*)
- **fabioutils** (*Section 15, p. 43*)
- **file\_series**:  
Authors: Henning O.  
(*Section 16, p. 45*)
- **fit2dmaskimage**: Author: Andy Hammersley, ESRF Translation into python/fabio: Jon Wright, ESRF  
(*Section 17, p. 53*)
- **fit2dspreadsheetimage**: Read the fit2d ascii image output...  
(*Section 18, p. 55*)
- **kcdimage**: Authors: Jerome Kieffer, ESRF email:jerome.kieffer@esrf.fr  
(*Section 19, p. 57*)
- **mar345image**:  
Authors: Henning O.  
(*Section 20, p. 59*)
- **marccdimage**:  
Authors: Henning O.  
(*Section 21, p. 61*)
- **openimage**:  
Authors: Henning O.

(Section 22, p. 63)

- **pilatusimage:**

Authors: Henning O.

(Section 23, p. 64)

- **pnmimage:**

Authors: Henning O.

(Section 24, p. 66)

- **readbytestream:** Reads a bytestream

(Section 25, p. 68)

- **tifimage:**

Authors: Henning O.

(Section 26, p. 69)

- **xsdimage:** Authors: Jérôme Kieffer, ESRF email:jerome.kieffer@esrf.fr

(Section 27, p. 71)

## 1.2 Variables

Name	Description
version	<b>Value:</b> '0.0.7'
__package__	<b>Value:</b> 'fabio'

## 2 Module fabio.GEImage

### 2.1 Functions

demo()

### 2.2 Variables

Name	Description
GE_HEADER_INFO	<b>Value:</b> [('ImageFormat', 10, None), ('VersionOfStandardHeader', 2...]
__package__	<b>Value:</b> 'fabio'

### 2.3 Class GEImage

#### 2.3.1 Methods

**read**(self, fname, frame=0)

Read in header into self.header and the data into self.data

Overrides: fabio.fabioimage.fabioimage.read

**write**(self, fname, force\_type=<type 'numpy.uint16'>)

Not yet implemented

Overrides: fabio.fabioimage.fabioimage.write

**getframe**(self, num)

Returns a frame as a new fabioimage object

Overrides: fabio.fabioimage.fabioimage.getframe

**next**(self)

Get the next image in a series as a fabio image

Overrides: fabio.fabioimage.fabioimage.next

<b>previous</b> ( <i>self</i> )
---------------------------------

Get the previous image in a series as a fabio image
---

Overrides: fabio.fabioimage.fabioimage.previous
---

***Inherited from fabio.fabioimage.fabioimage(Section 14.4)***

`__init__()`, `add()`, `getheader()`, `getmax()`, `getmean()`, `getmin()`, `getstddev()`, `integrate_area()`, `make_slice()`, `readheader()`, `rebin()`, `resetvals()`, `toPIL16()`, `update_header()`

***Inherited from object***

`__delattr__()`, `__format__()`, `__getattr__()`, `__hash__()`, `__new__()`, `__reduce__()`, `__reduce_ex__()`, `__repr__()`, `__setattr__()`, `__sizeof__()`, `__str__()`, `__subclasshook__()`

### 2.3.2 Properties

Name	Description
<i>Inherited from object</i>	
<code>__class__</code>	

### 3 Module fabio.GEimage\_old

Reads the header from a GE a-Si Angio Detector

Authors: Henning O. Sorensen & Erik Knudsen  
 Center for Fundamental Research: Metal Structures in Four Dimensions  
 Risoe National Laboratory  
 Frederiksborgvej 399  
 DK-4000 Roskilde  
 email:erik.knudsen@risoe.dk

+ Jon Wright, ESRF

The header information has been taken from the script read.GEaSi\_data.py  
 by  
 Antonino Miceli  
 Thu Jan 4 13:46:31 CST 2007

#### 3.1 Variables

Name	Description
<code>--package--</code>	<b>Value:</b> 'fabio'

#### 3.2 Class GEimage

### 3.2.1 Methods

**read**(*self*, *fname*)

Read in header into `self.header` and  
the data into `self.data`

Overrides: `fabio.fabioimage.fabioimage.read`

**Inherited from `fabio.fabioimage.fabioimage` (Section 14.4)**

`__init__()`, `add()`, `getframe()`, `getheader()`, `getmax()`, `getmean()`, `getmin()`, `getstddev()`, `integrate_area()`, `make_slice()`, `next()`, `previous()`, `readheader()`, `rebin()`, `resetvals()`, `toPIL16()`, `update_header()`, `write()`

**Inherited from `object`**

`__delattr__()`, `__format__()`, `__getattr__()`, `__hash__()`, `__new__()`, `__reduce__()`, `__reduce_ex__()`, `__repr__()`, `__setattr__()`, `__sizeof__()`, `__str__()`, `__subclasshook__()`

### 3.2.2 Properties

Name	Description
<i>Inherited from object</i>	
<code>__class__</code>	

## 4 Module fabio.HiPiCimage

Authors: Henning O. Sorensen & Erik Knudsen

Center for Fundamental Research: Metal Structures in Four Dimensions

Risoe National Laboratory

Frederiksborgvej 399

DK-4000 Roskilde

email:erik.knudsen@risoe.dk

+ Jon Wright, ESRF

Information about the file format from Masakatzu Kobayashi is highly appreciated

### 4.1 Variables

Name	Description
<code>--package--</code>	<b>Value:</b> 'fabio'

### 4.2 Class HiPiCimage

object └

fabio.fabioimage.fabioimage └

**fabio.HiPiCimage.HiPiCimage**

Read HiPic images e.g. collected with a Hamamatsu CCD camera

#### 4.2.1 Methods

**read**(*self*, *fname*)

Read in header into `self.header` and  
the data into `self.data`

Overrides: `fabio.fabioimage.fabioimage.read`

*Inherited from fabio.fabioimage.fabioimage(Section 14.4)*

`__init__()`, `add()`, `getframe()`, `getheader()`, `getmax()`, `getmean()`, `getmin()`, `getstddev()`, `integrate_area()`, `make_slice()`, `next()`, `previous()`, `readheader()`, `rebin()`, `resetvals()`, `toPIL16()`, `update_header()`, `write()`

### ***Inherited from object***

`__delattr__()`, `__format__()`, `__getattr__()`, `__hash__()`, `__new__()`, `__reduce__()`, `__reduce_ex__()`, `__repr__()`, `__setattr__()`, `__sizeof__()`, `__str__()`, `__subclasshook__()`

#### **4.2.2 Properties**

Name	Description
<i>Inherited from object</i>	
<code>__class__</code>	

## 5 Module *fabio.OXDimage*

Reads Oxford Diffraction Sapphire 3 images

Authors: Henning O. Sorensen & Erik Knudsen

Center for Fundamental Research: Metal Structures in Four Dimensions

Risoe National Laboratory

Frederiksborgvej 399

DK-4000 Roskilde

email:erik.knudsen@risoe.dk

+ Jon Wright, ESRF

### 5.1 Variables

Name	Description
DETECTOR_TYPES	<b>Value:</b> {0: 'Sapphire/KM4CCD (1x1: 0.06mm, 2x2: 0.12mm)', 1: 'Sap...
--package--	<b>Value:</b> 'fabio'

### 5.2 Class *OXDimage*

#### 5.2.1 Methods

**read**(*self*, *fname*)

Read in header into *self.header* and  
the data into *self.data*

Overrides: *fabio.fabioimage.fabioimage.read*

*Inherited from fabio.fabioimage.fabioimage(Section 14.4)*

`__init__()`, `add()`, `getframe()`, `getheader()`, `getmax()`, `getmean()`, `getmin()`, `getstddev()`, `integrate_area()`, `make_slice()`, `next()`, `previous()`, `readheader()`, `rebin()`, `resetvals()`, `toPIL16()`, `update_header()`, `write()`

### *Inherited from object*

`__delattr__()`, `__format__()`, `__getattr__()`, `__hash__()`, `__new__()`, `__reduce__()`, `__reduce_ex__()`, `__repr__()`, `__setattr__()`, `__sizeof__()`, `__str__()`, `__subclasshook__()`

### 5.2.2 Properties

Name	Description
<i>Inherited from object</i>	
<code>__class__</code>	

## 6 Module *fabio.adscimage*

Authors: Henning O. Sorensen & Erik Knudsen  
 Center for Fundamental Research: Metal Structures in Four Dimensions  
 Risoe National Laboratory  
 Frederiksborgvej 399  
 DK-4000 Roskilde  
 email:erik.knudsen@risoe.dk

+ mods for fabio by JPW

### 6.1 Functions

<b>test()</b>
testcase

### 6.2 Variables

Name	Description
<code>--package--</code>	Value: 'fabio'

### 6.3 Class *adscimage*

object └─  
 fabio.fabioimage.fabioimage └─  
                                   **fabio.adscimage.adscimage**

Read an image in ADSC format (quite similar to edf?)

#### 6.3.1 Methods

<b>read(<i>self</i>, <i>fname</i>)</b>
read in the file
Overrides: <code>fabio.fabioimage.fabioimage.read</code>

<b>write</b> ( <i>self</i> , <i>fname</i> )
---

Write adsc format
-------------------

Overrides: <code>fabio.fabioimage.fabioimage.write</code>
---

***Inherited from `fabio.fabioimage.fabioimage` (Section 14.4)***

`__init__()`, `add()`, `getframe()`, `getheader()`, `getmax()`, `getmean()`, `getmin()`, `getstddev()`, `integrate_area()`, `make_slice()`, `next()`, `previous()`, `readheader()`, `rebin()`, `resetvals()`, `toPIL16()`, `update_header()`

***Inherited from object***

`__delattr__()`, `__format__()`, `__getattr__()`, `__hash__()`, `__new__()`, `__reduce__()`, `__reduce_ex__()`, `__repr__()`, `__setattr__()`, `__sizeof__()`, `__str__()`, `__subclasshook__()`

### 6.3.2 Properties

Name	Description
<i>Inherited from object</i>	
<code>__class__</code>	

## 7 Module *fabio.bruker100image*

### 7.1 Variables

Name	Description
<code>--package--</code>	<b>Value:</b> 'fabio'

### 7.2 Class *bruker100image*

#### 7.2.1 Methods

**toPIL16**(*self*, *filename*=None)

Convert to Python Imaging Library 16 bit greyscale image

FIXME - this should be handled by the libraries now

Overrides: *fabio.fabioimage.fabioimage.toPIL16* extit(inherited documentation)

**read**(*self*, *fname*)

Read in and unpack the pixels (including overflow table

Overrides: *fabio.fabioimage.fabioimage.read* extit(inherited documentation)

*Inherited from **fabio.brukerimage.brukerimage**(Section 8.3)*

*write*(), *write2*()

*Inherited from **fabio.fabioimage.fabioimage**(Section 14.4)*

*\_init\_*(), *add*(), *getframe*(), *getheader*(), *getmax*(), *getmean*(), *getmin*(), *getstddev*(), *integrate\_area*(), *make\_slice*(), *next*(), *previous*(), *readheader*(), *rebin*(), *resetvals*(), *update\_header*()

*Inherited from **object***

`__delattr__()`, `__format__()`, `__getattr__()`, `__hash__()`, `__new__()`, `__reduce__()`, `__reduce_ex__()`,  
`__repr__()`, `__setattr__()`, `__sizeof__()`, `__str__()`, `__subclasshook__()`

### 7.2.2 Properties

Name	Description
<i>Inherited from object</i>	
<code>__class__</code>	

### 7.2.3 Class Variables

Name	Description
<i>Inherited from <code>fabio.brukerimage.brukerimage</code> (Section 8.3)</i>	
<code>__headerstring__</code>	

## 8 Module *fabio.brukerimage*

Authors: Henning O. Sorensen & Erik Knudsen  
 Center for Fundamental Research: Metal Structures in Four Dimensions  
 Risoe National Laboratory  
 Frederiksborgvej 399  
 DK-4000 Roskilde  
 email:erik.knudsen@risoe.dk

Based on: `openbruker`, `readbruker`, `readbrukerheader` functions in the `opendata` module of `ImageD11` written by Jon Wright, ESRF, Grenoble, France

### 8.1 Functions

<b>test()</b>
a testcase

### 8.2 Variables

Name	Description
<code>--package--</code>	<b>Value:</b> 'fabio'

### 8.3 Class *brukerimage*

object └─  
 fabio.fabioimage.fabioimage └─  
                                   **fabio.brukerimage.brukerimage**

**Known Subclasses:** `fabio.bruker100image.bruker100image`

Read and eventually write ID11 bruker (eg smart6500) images

### 8.3.1 Methods

<b>read</b> ( <i>self</i> , <i>fname</i> )
--

Read in and unpack the pixels (including overflow table)
--

Overrides: <code>fabio.fabioimage.fabioimage.read</code>
--

<b>write</b> ( <i>self</i> , <i>fname</i> )
---

Writes the image as EDF
-------------------------

FIXME - this should call <code>edfimage.write</code> if that is wanted?
---

eg: <code>obj = edfimage(data = self.data, header = self.header)</code> <code>obj.write(fname)</code> or maybe something like: <code>edfimage.write(self, fname)</code>
---

Overrides: <code>fabio.fabioimage.fabioimage.write</code>
---

<b>write2</b> ( <i>self</i> , <i>fname</i> )
--

FIXME: what is this?
----------------------

#### *Inherited from `fabio.fabioimage.fabioimage` (Section 14.4)*

`__init__()`, `add()`, `getframe()`, `getheader()`, `getmax()`, `getmean()`, `getmin()`, `getstddev()`, `integrate_area()`, `make_slice()`, `next()`, `previous()`, `readheader()`, `rebin()`, `resetvals()`, `toPIL16()`, `update_header()`

#### *Inherited from object*

`__delattr__()`, `__format__()`, `__getattr__()`, `__hash__()`, `__new__()`, `__reduce__()`, `__reduce_ex__()`, `__repr__()`, `__setattr__()`, `__sizeof__()`, `__str__()`, `__subclasshook__()`

### 8.3.2 Properties

Name	Description
<i>Inherited from object</i>	
<code>__class__</code>	

### 8.3.3 Class Variables

Name	Description
<code>__headerstring__</code>	<b>Value:</b> ''

## 9 Module *fabio.cbfimage*

**Authors:** Jérôme Kieffer, ESRF  
 email:jerome.kieffer@esrf.fr

Cif Binary Files images are 2D images written by the Pilatus detector and others. They use a modified (simplified) byte-offset algorithm.

CIF is a library for manipulating Crystallographic information files and tries to conform to the specification of the IUCR

**Author:** Jérôme Kieffer

**Contact:** jerome.kieffer@esrf.eu

**Copyright:** European Synchrotron Radiation Facility, Grenoble, France

**License:** GPLv3+

### 9.1 Variables

Name	Description
DATA_TYPES	<b>Value:</b> {'signed 16-bit integer': <type 'numpy.int16'>, 'signed 3...
MINIMUM_KEYS	<b>Value:</b> ['X-Binary-Size-Fastest-Dimension', 'ByteOrder', 'Data ty...
DEFAULT_VALUES	<b>Value:</b> {'Data type': 'signed 32-bit integer', 'X-Binary-Element-...
__package__	<b>Value:</b> 'fabio'

### 9.2 Class *cbfimage*

Read the Cif Binary File data format

### 9.2.1 Methods

**`__init__(self, fname=None)`**

Constructor of the class CIF Binary File reader.

**Parameters**

**fname:** the name of the file to open

(*type=string*)

Overrides: `object.__init__`

**`read(self, fname)`**

Read in header into `self.header` and  
the data into `self.data`

Overrides: `fabio.fabioimage.fabioimage.read`

**`analysePython(stream, size)`**

Analyze a stream of char with any length of exception (2,4, or 8 bytes integers)

**Parameters**

**stream:** string representing the compressed data

**size:** the size of the output array (of longInts)

**Return Value**

data decompressed

(*type=numpy.ndarrays*)

**`analyseWeave(stream, size)`**

Analyze a stream of char with any length of exception (2,4, or 8 bytes integers)

**Return Value**

data decompressed

(*type=numpy.ndarray*)

```
analyseNumpy(stream, size=None)
```

Analyze a stream of char with any length of exception:  
2, 4, or 8 bytes integers

@return: data decompressed

@rtype: numpy.ndarrays

*Inherited from fabio.fabioimage.fabioimage(Section 14.4)*

add(), getframe(), getheader(), getmax(), getmean(), getmin(), getstddev(), integrate\_area(), make\_slice(), next(), previous(), readheader(), rebin(), resetvals(), toPIL16(), update\_header(), write()

*Inherited from object*

\_\_delattr\_\_(), \_\_format\_\_(), \_\_getattr\_\_(), \_\_hash\_\_(), \_\_new\_\_(), \_\_reduce\_\_(), \_\_reduce\_ex\_\_(), \_\_repr\_\_(), \_\_setattr\_\_(), \_\_sizeof\_\_(), \_\_str\_\_(), \_\_subclasshook\_\_()

### 9.2.2 Properties

Name	Description
<i>Inherited from object</i>	
__class__	

## 9.3 Class CIF

This is the CIF class, it represents the CIF dictionary; and as a python dictionary thus inherits from the dict built in class.

## 9.3.1 Methods

---

**\_\_init\_\_**(*self*, *\_strFilename*=None)

---

Constructor of the class.

**Parameters**

**\_strFilename:** the name of the file to open  
*(type=filename (str) or file object)*

**Return Value**

new empty dictionary

Overrides: object.\_\_init\_\_

---

**readCIF**(*self*, *\_strFilename*)

---

Just call loadCIF: Load the CIF file and sets the CIF dictionary into the object

**Parameters**

**\_strFilename:** the name of the file to open  
*(type=string)*

---

**loadCIF**(*self*, *\_strFilename*, *\_bKeepComment*=False)

---

Load the CIF file and returns the CIF dictionary into the object

**Parameters**

**\_strFilename:** the name of the file to open  
*(type=string)*

**\_bKeepComment:** shall we remove comments  
*(type=boolean)*

**Return Value**

None

---

**isAscii**(*\_strIn*)

---

Check if all characters in a string are ascii,

**Parameters**

**\_strIn:** input string  
*(type=python string)*

**Return Value**

boolean  
*(type=boolean)*

---

**saveCIF**(*self*, *\_strFilename*='test.cif')

---

Transforms the CIF object in string then write it into the given file**Parameters**

*\_strFilename*: the of the file to be written  
(*type=string*)

---

**exists**(*self*, *sKey*)

---

Check if the key exists in the CIF and is non empty.**Parameters**

*sKey*: CIF key  
(*type=string*)

**Return Value**

True if the key exists in the CIF dictionary and is non empty  
(*type=boolean*)

---

**existsInLoop**(*self*, *sKey*)

---

Check if the key exists in the CIF dictionary.**Parameters**

*sKey*: CIF key  
(*type=string*)

**Return Value**

True if the key exists in the CIF dictionary and is non empty  
(*type=boolean*)

---

**loadCHIPLOT**(*self*, *\_strFilename*)

---

Load the powder diffraction CHIPLOT file and returns the pd\_CIF dictionary in the object**Parameters**

*\_strFilename*: the name of the file to open  
(*type=string*)

**Return Value**

the CIF object corresponding to the powder diffraction  
(*type=dictionary*)

<b>LoopHasKey</b> ( <i>loop</i> , <i>key</i> )
--

Returns True if the key (string) exist in the array called loop
---

***Inherited from dict***

\_\_cmp\_\_(), \_\_contains\_\_(), \_\_delitem\_\_(), \_\_eq\_\_(), \_\_ge\_\_(), \_\_getattr\_\_(), \_\_getitem\_\_(), \_\_gt\_\_(), \_\_iter\_\_(), \_\_le\_\_(), \_\_len\_\_(), \_\_lt\_\_(), \_\_ne\_\_(), \_\_new\_\_(), \_\_repr\_\_(), \_\_setitem\_\_(), \_\_sizeof\_\_(), clear(), copy(), fromkeys(), get(), has\_key(), items(), iteritems(), iterkeys(), itervalues(), keys(), pop(), popitem(), setdefault(), update(), values()

***Inherited from object***

\_\_delattr\_\_(), \_\_format\_\_(), \_\_reduce\_\_(), \_\_reduce\_ex\_\_(), \_\_setattr\_\_(), \_\_str\_\_(), \_\_subclasshook\_\_()

**9.3.2 Properties**

Name	Description
<i>Inherited from object</i>

## 10 Module *fabio.datIO*

Authors: Henning O. Sorensen & Erik Knudsen

Center for Fundamental Research: Metal Structures in Four Dimensions

Risoe National Laboratory

Frederiksborgvej 399

DK-4000 Roskilde

email:erik.knudsen@risoe.dk

and Jon Wright, ESRF

### 10.1 Variables

Name	Description
<code>__package__</code>	<b>Value:</b> None

### 10.2 Class *fabiodata*

object └─ **fabio.datIO.fabiodata**

**Known Subclasses:** *fabio.datIO.columnfile*

A common class for dataIO in fable Contains a 2d numpy array for keeping data, and two lists (clabels and rlabels) containing labels for columns and rows respectively

#### 10.2.1 Methods

<b><code>__init__(self, data=None, clabels=None, rlabels=None, fname=None)</code></b>
---

set up initial values
-----------------------

Overrides: object.__init__
----------------------------

<b><code>read(self, fname=None)</code></b>
--

To be overridden by format specific subclasses
--

***Inherited from object***

`__delattr__()`, `__format__()`, `__getattr__()`, `__hash__()`, `__new__()`, `__reduce__()`, `__reduce_ex__()`,

`__repr__()`, `__setattr__()`, `__sizeof__()`, `__str__()`, `__subclasshook__()`

### 10.2.2 Properties

Name	Description
<i>Inherited from object</i>	
<code>__class__</code>	

## 10.3 Class *columnfile*

### 10.3.1 Methods

<b><code>read(self, fname)</code></b>
To be overridden by format specific subclasses
Overrides: <code>fabio.datIO.fabiodata.read</code> <code>exitit</code> (inherited documentation)

*Inherited from `fabio.datIO.fabiodata`(Section 10.2)*

`__init__()`

*Inherited from object*

`__delattr__()`, `__format__()`, `__getattr__()`, `__hash__()`, `__new__()`, `__reduce__()`, `__reduce_ex__()`, `__repr__()`, `__setattr__()`, `__sizeof__()`, `__str__()`, `__subclasshook__()`

### 10.3.2 Properties

Name	Description
<i>Inherited from object</i>	
<code>__class__</code>	

## 11 Module *fabio.dm3image*

Authors: Henning O. Sorensen & Erik Knudsen

Center for Fundamental Research: Metal Structures in Four Dimensions

Risoe National Laboratory

Frederiksborgvej 399

DK-4000 Roskilde

email:erik.knudsen@risoe.dk

+ Jon Wright, ESRF

### 11.1 Variables

Name	Description
DATA_TYPES	<b>Value:</b> {2: <type 'numpy.int16'>, 3: <type 'numpy.int32'>, 4: <ty...
DATA_BYTES	<b>Value:</b> {2: 2, 3: 4, 4: 2, 5: 4, 6: 4, 7: 8, 8: 1, 9: None, 10: N...
--package--	<b>Value:</b> 'fabio'

### 11.2 Class *dm3image*

object └─

fabio.fabioimage.fabioimage └─

**fabio.dm3image.dm3image**

Read and try to write the dm3 data format

#### 11.2.1 Methods

**read**(*self*, *fname*)

To be overridden - fill in self.header and self.data

Overrides: fabio.fabioimage.fabioimage.read extit(inherited documentation)

**readbytes**(*self*, *bytes\_to\_read*, *format*, *swap*=True)

<code>read_tag_group(<i>self</i>)</code>
--

<code>read_tag_entry(<i>self</i>)</code>
--

<code>read_tag_type(<i>self</i>)</code>
---

<code>read_data(<i>self</i>)</code>
-------------------------------------

***Inherited from `fabio.fabioimage.fabioimage` (Section 14.4)***

`__init__()`, `add()`, `getframe()`, `getheader()`, `getmax()`, `getmean()`, `getmin()`, `getstddev()`, `integrate_area()`, `make_slice()`, `next()`, `previous()`, `readheader()`, `rebin()`, `resetvals()`, `toPIL16()`, `update_header()`, `write()`

***Inherited from object***

`__delattr__()`, `__format__()`, `__getattr__()`, `__hash__()`, `__new__()`, `__reduce__()`, `__reduce_ex__()`, `__repr__()`, `__setattr__()`, `__sizeof__()`, `__str__()`, `__subclasshook__()`

### 11.2.2 Properties

Name	Description
<i>Inherited from object</i>	
<code>__class__</code>	

## 12 Module fabio.edfimage

License: GPLv2+

Authors: Henning O. Sorensen & Erik Knudsen  
 Center for Fundamental Research: Metal Structures in Four Dimensions  
 Risoe National Laboratory  
 Frederiksborgvej 399  
 DK-4000 Roskilde  
 email:erik.knudsen@risoe.dk

+ Jon Wright, ESRF

2011-02-11: Mostly rewritten by Jérôme Kieffer (Jerome.Kieffer@esrf.eu)  
 European Synchrotron Radiation Facility  
 Grenoble (France)

### 12.1 Variables

Name	Description
BLOCKSIZE	<b>Value:</b> 512
DATA_TYPES	<b>Value:</b> {'Double': <type 'numpy.float64'>, 'DoubleIEEE64': <type ...
NUMPY_EDF_DTYPE	<b>Value:</b> {'float32': 'FloatValue', 'float64': 'DoubleValue', 'int1...
MINIMUM_KEYS	<b>Value:</b> ['HEADERID', 'IMAGE', 'BYTEORDER', 'DATATYPE', 'DIM_1', '...
DEFAULT_VALUES	<b>Value:</b> {}
__package__	<b>Value:</b> 'fabio'

### 12.2 Class Frame

object └─  
           **fabio.edfimage.Frame**

A class representing a single frame in an EDF file

## 12.2.1 Methods

**`__init__(self, data=None, header=None, header_keys=None, number=None)`**

`x.__init__(...)` initializes `x`; see `x.__class__.__doc__` for signature

Overrides: `object.__init__` `extit`(inherited documentation)

**`parseheader(self, block)`**

Parse the header in some EDF format from an already open file

**Parameters**

**`block`:** string representing the header block  
*(type=string, should be full ascii)*

**Return Value**

size of the binary blob

**`swap_needed(self)`**

Decide if we need to byteswap

**`getData(self)`**

Unpack a binary blob according to the specification given in the header

**Return Value**

dataset as `numpy.ndarray`

**`setData(self, npa=None)`**

Setter for data in edf frame

**`getEdfBlock(self, force_type=None)`**

**Parameters**

**`force_type`:** type of the dataset to be enforced like "float64" or  
 "uint16"  
*(type=string or numpy.dtype)*

**Return Value**

ascii header block

*(type=python string with the concatenation of the ascii header and  
 the binary data block)*

*Inherited from object*

`__delattr__()`, `__format__()`, `__getattr__()`, `__hash__()`, `__new__()`, `__reduce__()`, `__reduce_ex__()`,  
`__repr__()`, `__setattr__()`, `__sizeof__()`, `__str__()`, `__subclasshook__()`

### 12.2.2 Properties

Name	Description
<code>data</code>	Unpack a binary blob according to the specification given in the header
<i>Inherited from object</i>	
<code>__class__</code>	

## 12.3 Class *edfimage*

Read and try to write the ESRF edf data format

### 12.3.1 Methods

**`__init__(self, data=None, header=None, header_keys=None, frames=None)`**

Set up initial values

Overrides: `object.__init__` `exitit`(inherited documentation)

**`read(self, fname)`**

Read in header into `self.header` and  
 the data into `self.data`

Overrides: `fabio.fabioimage.fabioimage.read`

**`swap_needed(self)`**

Decide if we need to byteswap

**unpack(*self*)**

Unpack a binary blob according to the specification given in the header and return the dataset

**Return Value**

dataset as `numpy.ndarray`

**getframe(*self*, *num*)**

returns the file numbered 'num' in the series as a `fabioimage`

Overrides: `fabio.fabioimage.fabioimage.getframe`

**previous(*self*)**

returns the previous file in the series as a `fabioimage`

Overrides: `fabio.fabioimage.fabioimage.previous`

**next(*self*)**

returns the next file in the series as a `fabioimage`

Overrides: `fabio.fabioimage.fabioimage.next`

**write(*self*, *fname*, *force\_type*=None)**

Try to write a file check we can write zipped also mimics that fabian was writing uint16 (we sometimes want floats)

**Parameters**

**force\_type:** can be `numpy.uint16` or simply "float"

**Return Value**

None

Overrides: `fabio.fabioimage.fabioimage.write`

**appendFrame(*self*, *frame*=None, *data*=None, *header*=None)**

Method used add a frame to an EDF file

**Parameters**

**frame:** frame to append to edf image

(*type=instance of Frame*)

**Return Value**

None

**deleteFrame**(*self*, *frameNb*=None)

Method used to remove a frame from an EDF image. by default the last one is removed.

**Parameters**

**frameNb**: frame number to remove, by default the last.

(*type=integer*)

**Return Value**

None

**getNbFrames**(*self*)

Getter for number of frames

**setNbFrames**(*self*, *val*)

Setter for number of frames ... should do nothing. Here just to avoid bugs

**getHeader**(*self*)

Getter for the headers. used by the property header,

**setHeader**(*self*, *\_dictHeader*)

Enforces the propagation of the header to the list of frames

**delHeader**(*self*)

Deleter for edf header

**getHeaderKeys**(*self*)

Getter for edf header\_keys

**setHeaderKeys**(*self*, *\_listtHeader*)

Enforces the propagation of the header\_keys to the list of frames

**Parameters**

**\_listtHeader**: list of the (ordered) keys in the header

(*type=python list*)

**delHeaderKeys**(*self*)

Deleter for edf header\_keys

**getData(self)**

getter for edf Data

**Return Value**

data for current frame

*(type=numpy.ndarray)***setData(self, \_data)**

Enforces the propagation of the data to the list of frames

**Parameters****\_data:** numpy array representing data**delData(self)**

deleter for edf Data

**getCapsHeader(self)**

getter for edf headers keys in upper case

**Return Value**

data for current frame

*(type=dict)***setCapsHeader(self, \_data)**

Enforces the propagation of the header keys to the list of frames

**Parameters****\_data:** numpy array representing data**delCapsHeader(self)**

deleter for edf capsHeader

**getDim1(self)****setDim1(self, \_iVal)****getDim2(self)****setDim2(self, \_iVal)****getDims(self)**

<code>getByteCode(self)</code>
--------------------------------

<code>setByteCode(self, _iVal)</code>
---------------------------------------

<code>getBpp(self)</code>
---------------------------

<code>setBpp(self, _iVal)</code>
----------------------------------

***Inherited from `fabio.fabioimage.fabioimage` (Section 14.4)***

`add()`, `getheader()`, `getmax()`, `getmean()`, `getmin()`, `getstddev()`, `integrate_area()`,  
`make_slice()`, `readheader()`, `rebin()`, `resetvals()`, `toPIL16()`, `update_header()`

***Inherited from object***

`__delattr__()`, `__format__()`, `__getattr__()`, `__hash__()`, `__new__()`, `__reduce__()`, `__reduce_ex__()`,  
`__repr__()`, `__setattr__()`, `__sizeof__()`, `__str__()`, `__subclasshook__()`

### 12.3.2 Properties

Name	Description
<code>nframes</code>	Getter for number of frames
<code>header</code>	property: header of EDF file
<code>header_keys</code>	property: header_keys of EDF file
<code>data</code>	property: data of EDF file
<code>capsHeader</code>	property: capsHeader of EDF file, i.e. the keys of the header in UPPER case.
<code>dim1</code>	
<code>dim2</code>	
<code>dims</code>	
<code>bytecode</code>	
<code>bpp</code>	
<i>Inherited from object</i>	
<code>__class__</code>	

## 13 Module fabio.fabian\_mar\_header

This is the mar header interpreter from Fabian by HOS and EK.

JPW replaced it with a parser based approach because:

this might be hard to maintain, in the even of a single incorrect number somewhere  
theoretically all header items are picked up by the parser, automatically  
the pylint score for this was rather low

### 13.1 Variables

Name	Description
<code>--package--</code>	Value: None

### 13.2 Class obsolete

## 14 Module *fabio.fabioimage*

Authors: Henning O. Sorensen & Erik Knudsen

Center for Fundamental Research: Metal Structures in Four Dimensions

Risoe National Laboratory

Frederiksborgvej 399

DK-4000 Roskilde

email:erik.knudsen@risoe.dk

and Jon Wright, Jerome Kieffer: ESRF

### 14.1 Functions

<b>test()</b>
check some basic <i>fabioimage</i> functionality

### 14.2 Variables

Name	Description
<code>--package--</code>	<b>Value:</b> 'fabio'

### 14.3 Class *fabioStream*

StringIO.StringIO

**fabio.fabioimage.fabioStream**

just an interface providing the name and mode property to a StringIO

BugFix for MacOSX

#### 14.3.1 Methods

<b><code>--init--(self, data, fname=None, mode='r')</code></b>
Overrides: StringIO.StringIO. <code>--init--</code>

*Inherited from StringIO.StringIO*

`__iter__()`, `close()`, `flush()`, `getvalue()`, `isatty()`, `next()`, `read()`, `readline()`, `readlines()`,  
`seek()`, `tell()`, `truncate()`, `write()`, `writelines()`

## 14.4 Class *fabioimage*

object └─  
**fabio.fabioimage.fabioimage**

**Known Subclasses:** *fabio.pnmimage.pnmimage*, *fabio.tifimage.tifimage*, *fabio.OXDimage.OXDimage*,  
*fabio.fit2dmaskimage.fit2dmaskimage*, *fabio.edfimage.edfimage*, *fabio.fit2dspearsheetimage.fit2dspearsheetimage*,  
*fabio.mar345image.mar345image*, *fabio.kcdimage.kcdimage*, *fabio.dm3image.dm3image*, *fabio.GEimage\_old.GEimage\_old*,  
*fabio.adscimage.adscimage*, *fabio.cbfimage.cbfimage*, *fabio.xsdimage.xsdimage*, *fabio.brukerimage.brukerimage*,  
*fabio.HiPiCimage.HiPiCimage*, *fabio.GEimage.GEimage*

A common object for images in fable Contains a numpy array (`.data`) and dict of meta data (`.header`)

### 14.4.1 Methods

<b><code>__init__(self, data=None, header=None)</code></b>
--

Set up initial values
-----------------------

Overrides: <code>object.__init__</code>
---

<b><code>getframe(self, num)</code></b>
---

returns the file numbered 'num' in the series as a <i>fabioimage</i>
--

<b><code>previous(self)</code></b>
------------------------------------

returns the previous file in the series as a <i>fabioimage</i>
--

<b><code>next(self)</code></b>
--------------------------------

returns the next file in the series as a <i>fabioimage</i>
--

<b><code>toPIL16(self, filename=None)</code></b>
--

Convert to Python Imaging Library 16 bit greyscale image
--

FIXME - this should be handled by the libraries now
---

**getheader**(*self*)

returns self.header

**getmax**(*self*)

Find max value in self.data, caching for the future

**getmin**(*self*)

Find min value in self.data, caching for the future

**make\_slice**(*self*, *coords*)

Convert a len(4) set of coords into a len(2) tuple (pair) of slice objects the latter are immutable, meaning the roi can be cached

**integrate\_area**(*self*, *coords*)

Sums up a region of interest if len(coords) == 4 -&gt; convert coords to slices if len(coords) == 2 -&gt; use as slices floor -&gt; ? removed as unused in the function.

**getmean**(*self*)

return the mean

**getstddev**(*self*)

return the standard deviation

**add**(*self*, *other*)

Add another Image - warnign, does not clip to 16 bit images by default

**resetvals**(*self*)

Reset cache - call on changing data

<b>rebin</b> ( <i>self</i> , <i>x_rebin_fact</i> , <i>y_rebin_fact</i> , <i>keep_I=True</i> )
---

Rebin the data and adjust dims
--------------------------------

<b>Parameters</b>
-------------------

<b>x_rebin_fact:</b> x binning factor ( <i>type=int</i> )
--

<b>y_rebin_fact:</b> y binning factor ( <i>type=int</i> )
--

<b>keep_I:</b> shall the signal increase ? ( <i>type=boolean</i> )
---

<b>write</b> ( <i>self</i> , <i>fname</i> )
---

To be overwritten - write the file
------------------------------------

<b>readheader</b> ( <i>self</i> , <i>filename</i> )
---

Call the <code>_readheader</code> function...
---

<b>update_header</b> ( <i>self</i> , <i>**kws</i> )
---

update the header entries by default pass in a dict of key, values.
---

<b>read</b> ( <i>self</i> , <i>filename</i> )
---

To be overridden - fill in <code>self.header</code> and <code>self.data</code>
--

### *Inherited from object*

`__delattr__()`, `__format__()`, `__getattr__()`, `__hash__()`, `__new__()`, `__reduce__()`, `__reduce_ex__()`, `__repr__()`, `__setattr__()`, `__sizeof__()`, `__str__()`, `__subclasshook__()`

#### 14.4.2 Properties

Name	Description
<i>Inherited from object</i>	
<code>__class__</code>	

## 15 Module *fabio.fabioutils*

### 15.1 Functions

**construct\_filename**(\*args, \*\*kws)

**getnum**(name)

# try to figure out a file number # guess it starts at the back

**numstem**(name)

cant see how to do without reversing strings Match 1 or more digits going backwards from the end of the string

**deconstruct\_filename**(filename)

Break up a filename to get image type and number

**next\_filename**(name, padding=True)

increment number

**previous\_filename**(name, padding=True)

decrement number

**jump\_filename**(name, num, padding=True)

jump to number

**extract\_filename**(name)

extract file number

### 15.2 Variables

Name	Description
FILETYPES	<b>Value:</b> {'cbf': ['cbf'], 'cbf.bz2': ['cbf'], 'cbf.gz': ['cbf'], ...}
COMPRESSORS	<b>Value:</b> {'bz2': 'bzip2 -dc ', 'gz': 'gzip -dc '}
lines	<b>Value:</b> 'bzip2, a block-sorting file compressor. Version 1.0.5, ...
__package__	<b>Value:</b> 'fabio'

*continued on next page*

Name	Description
key	Value: 'cbf'

### 15.3 Class `filename_object`

The 'meaning' of a filename

#### 15.3.1 Methods

<b><code>__init__</code></b> ( <i>self</i> , <i>stem</i> , <i>num</i> =None, <i>directory</i> =None, <i>format</i> =None, <i>extension</i> =None, <i>postnum</i> =None, <i>digits</i> =4)
---

<b><code>str</code></b> ( <i>self</i> )
---

Return a string representation
--------------------------------

<b><code>tostring</code></b> ( <i>self</i> )
--

convert yourself to a string
------------------------------

## 16 Module *fabio.file\_series*

Authors: Henning O. Sorensen & Erik Knudsen  
Center for Fundamental Research: Metal Structures in Four Dimensions  
Risoe National Laboratory  
Frederiksborgvej 399  
DK-4000 Roskilde  
email:erik.knudsen@risoe.dk

+ Jon Wright, ESRF

### 16.1 Functions

<code>new_file_series0(<i>first_object</i>, <i>first</i>=None, <i>last</i>=None, <i>step</i>=1)</code>
--

Created from a fabio image first and last are file numbers
--

```
new_file_series(first_object, nimages=0, step=1, traceback=False)
```

A generator function that creates a file series starting from a *fabioimage*. Iterates through all images in a file (if more than 1), then proceeds to the next file as determined by *fabio.next\_filename*.

*first\_object*: the starting *fabioimage*, which will be the first one yielded in the sequence

*nimages*: the maximum number of images to consider

*step*: step size, will yield the first and every *step*'th image until *nimages* is reached. (e.g. *nimages* = 5, *step* = 2 will yield 3 images (0, 2, 4))

*traceback*: if True causes it to print a traceback in the event of an exception (missing image, etc.). Otherwise the calling routine can handle the exception as it chooses

yields: the next *fabioimage* in the series.

In the event there is an exception, it yields the *sys.exec\_info* for the exception instead. *sys.exec\_info* is a tuple:

```
( exceptionType, exceptionValue, exceptionTraceback )
```

from which all the exception information can be obtained.

Suggested usage:

```
for obj in new_file_series( ... ):
    if not isinstance( obj, fabio.fabioimage.fabioimage ):
        # deal with errors like missing images, non readable files, etc
        # e.g.
        traceback.print_exception(obj[0], obj[1], obj[2])
```

## 16.2 Variables

Name	Description
<code>__package__</code>	<b>Value:</b> 'fabio'

## 16.3 Class *file\_series*

**Known Subclasses:** *fabio.file\_series.numbered\_file\_series*

represents a series of files to iterate  
has an idea of a current position to do next and prev

You also get from the list python superclass:

- append
- count
- extend
- insert
- pop
- remove
- reverse
- sort

### 16.3.1 Methods

**`__init__(self, list_of_strings)`**

arg should be a list of strings which are filenames

**Return Value**

new empty list

Overrides: `object.__init__`

**`first(self)`**

first image in series

**`last(self)`**

last in series

**`previous(self)`**

prev in a sequence

**`current(self)`**

current position in a sequence

**`next(self)`**

next in a sequence

**jump**(*self*, *num*)

goto a position in sequence

**len**(*self*)

number of files

**first\_image**(*self*)

first image in a sequence

**last\_image**(*self*)

last image in a sequence

**next\_image**(*self*)

Return the next image

**previous\_image**(*self*)

Return the previous image

**jump\_image**(*self*, *num*)

jump to and read image

**current\_image**(*self*)

current image in sequence

**first\_object**(*self*)

first image in a sequence

**last\_object**(*self*)

last image in a sequence

**next\_object**(*self*)

Return the next image

**previous\_object**(*self*)

Return the previous image

<b>jump_object</b> ( <i>self</i> , <i>num</i> )
---

jump to and read image
------------------------

<b>current_object</b> ( <i>self</i> )
---------------------------------------

current image in sequence
---------------------------

***Inherited from list***

```
__add__(), __contains__(), __delitem__(), __delslice__(), __eq__(), __ge__(), __getattr__(),
__getitem__(), __getslice__(), __gt__(), __iadd__(), __imul__(), __iter__(), __le__(), __len__(),
__lt__(), __mul__(), __ne__(), __new__(), __repr__(), __reversed__(), __rmul__(), __setitem__(),
__setslice__(), __sizeof__(), append(), count(), extend(), index(), insert(), pop(), re-
move(), reverse(), sort()
```

***Inherited from object***

```
__delattr__(), __format__(), __reduce__(), __reduce_ex__(), __setattr__(), __str__(), __subclasshook__()
```

**16.3.2 Properties**

Name	Description
<i>Inherited from object</i>	
<code>__class__</code>	

**16.3.3 Class Variables**

Name	Description
<i>Inherited from list</i>	
<code>__hash__</code>	

**16.4 Class `numbered_file_series`**

```

object ┌
      │
      └─ list ┌
            │
            └─ fabio.file_series.file_series ┌
                                                  └─ fabio.file_series.numbered_file_series

```

```
mydata0001.edf = "mydata" + 0001 + ".edf" mydata0002.edf = "mydata" + 0002 + ".edf"
mydata0003.edf = "mydata" + 0003 + ".edf"
```

### 16.4.1 Methods

```
__init__(self, stem, first, last, extension, digits=4, padding='Y', step=1)
```

stem - first part of the name  
step - in case of every nth file  
padding - possibility for specifying that numbers are not padded  
 with zeroes up to digits

**Return Value**  
new empty list

Overrides: `object.__init__`

#### *Inherited from `fabio.file_series.file_series` (Section 16.3)*

`current()`, `current_image()`, `current_object()`, `first()`, `first_image()`, `first_object()`,  
`jump()`, `jump_image()`, `jump_object()`, `last()`, `last_image()`, `last_object()`, `len()`, `next()`,  
`next_image()`, `next_object()`, `previous()`, `previous_image()`, `previous_object()`

#### *Inherited from `list`*

`__add__()`, `__contains__()`, `__delitem__()`, `__delslice__()`, `__eq__()`, `__ge__()`, `__getattr__()`,  
`__getitem__()`, `__getslice__()`, `__gt__()`, `__iadd__()`, `__imul__()`, `__iter__()`, `__le__()`, `__len__()`,  
`__lt__()`, `__mul__()`, `__ne__()`, `__new__()`, `__repr__()`, `__reversed__()`, `__rmul__()`, `__setitem__()`,  
`__setslice__()`, `__sizeof__()`, `append()`, `count()`, `extend()`, `index()`, `insert()`, `pop()`, `re-`  
`move()`, `reverse()`, `sort()`

#### *Inherited from `object`*

`__delattr__()`, `__format__()`, `__reduce__()`, `__reduce_ex__()`, `__setattr__()`, `__str__()`, `__subclasshook__()`

### 16.4.2 Properties

Name	Description
<i>Inherited from <code>object</code></i>	
<code>__class__</code>	

### 16.4.3 Class Variables

Name	Description
<i>Inherited from <code>list</code></i>	
<code>__hash__</code>	

## 16.5 Class `filename_series`

Much like the others, but created from a string filename

### 16.5.1 Methods

<b><code>__init__</code></b> ( <i>self</i> , <i>filename</i> )
--

create from a filename (String)
---------------------------------

<b><code>next</code></b> ( <i>self</i> )
--

increment number
------------------

<b><code>previous</code></b> ( <i>self</i> )
--

decrement number
------------------

<b><code>current</code></b> ( <i>self</i> )
---

return current filename string
--------------------------------

<b><code>jump</code></b> ( <i>self</i> , <i>num</i> )
---

jump to a specific number
---------------------------

<b><code>next_image</code></b> ( <i>self</i> )
--

returns the next image as a <code>fabioimage</code>
---

<b><code>prev_image</code></b> ( <i>self</i> )
--

returns the previos image as a <code>fabioimage</code>
--

<b><code>current_image</code></b> ( <i>self</i> )
---

returns the current image as a <code>fabioimage</code>
--

<b><code>jump_image</code></b> ( <i>self</i> , <i>num</i> )
---

returns the image number as a <code>fabioimage</code>
---

<b><code>next_object</code></b> ( <i>self</i> )
---

returns the next filename as a <code>fabio.filename_object</code>
---

**previous\_object**(*self*)returns the previous filename as a `fabio.filename_object`**current\_object**(*self*)returns the current filename as a `fabio.filename_object`**jump\_object**(*self*, *num*)returns the filename num as a `fabio.filename_object`

## 17 Module *fabio.fit2dmaskimage*

Author: Andy Hammersley, ESRF Translation into python/fabio: Jon Wright, ESRF

### 17.1 Variables

Name	Description
<code>--package--</code>	<b>Value:</b> 'fabio'

### 17.2 Class *fit2dmaskimage*

Read and try to write Andy Hammersley's mask format

#### 17.2.1 Methods

**read**(*self*, *fname*)

Read in header into `self.header` and  
the data into `self.data`

Overrides: `fabio.fabioimage.fabioimage.read`

**write**(*self*, *fname*)

Try to write a file check we can write zipped also mimics that fabian was  
writing uint16 (we sometimes want floats)

Overrides: `fabio.fabioimage.fabioimage.write`

**Inherited from *fabio.fabioimage.fabioimage* (Section 14.4)**

`__init__()`, `add()`, `getframe()`, `getheader()`, `getmax()`, `getmean()`, `getmin()`, `getstddev()`, `integrate_area()`, `make_slice()`, `next()`, `previous()`, `readheader()`, `rebin()`, `resetvals()`, `toPIL16()`, `update_header()`

**Inherited from *object***

`__delattr__()`, `__format__()`, `__getattr__()`, `__hash__()`, `__new__()`, `__reduce__()`, `__reduce_ex__()`,  
`__repr__()`, `__setattr__()`, `__sizeof__()`, `__str__()`, `__subclasshook__()`

### 17.2.2 Properties

Name	Description
<i>Inherited from object</i>	
<code>__class__</code>	

## 18 Module *fabio.fit2dspreadsheetimage*

Read the fit2d ascii image output  
+ Jon Wright, ESRF

### 18.1 Variables

Name	Description
<code>--package--</code>	<b>Value:</b> 'fabio'

### 18.2 Class *fit2dspreadsheetimage*

Read a fit2d ascii format

#### 18.2.1 Methods

<b><code>read(self, fname)</code></b>
<p>Read in header into <code>self.header</code> and the data into <code>self.data</code></p> <p>Overrides: <code>fabio.fabioimage.fabioimage.read</code></p>

***Inherited from `fabio.fabioimage.fabioimage` (Section 14.4)***

`__init__()`, `add()`, `getframe()`, `getheader()`, `getmax()`, `getmean()`, `getmin()`, `getstddev()`, `integrate_area()`, `make_slice()`, `next()`, `previous()`, `readheader()`, `rebin()`, `resetvals()`, `toPIL16()`, `update_header()`, `write()`

***Inherited from `object`***

`__delattr__()`, `__format__()`, `__getattr__()`, `__hash__()`, `__new__()`, `__reduce__()`, `__reduce_ex__()`, `__repr__()`, `__setattr__()`, `__sizeof__()`, `__str__()`, `__subclasshook__()`

**18.2.2 Properties**

Name	Description
<i>Inherited from object</i> __class__	

## 19 Module *fabio.kcdimage*

Authors: Jerome Kieffer, ESRF  
 email:jerome.kieffer@esrf.fr

kcd images are 2D images written by the old KappaCCD diffractometer built by Nonius in t  
 Based on the edfimage.py parser.

### 19.1 Variables

Name	Description
DATA_TYPES	Value: {'u16': <type 'numpy.uint16'>}
MINIMUM_KEYS	Value: ['ByteOrder', 'Data type', 'X dimension', 'Y dimension', ...]
DEFAULT_VALUES	Value: {'Data type': 'u16'}
__package__	Value: 'fabio'

### 19.2 Class *kcdimage*

Read the Nonius kcd data format

#### 19.2.1 Methods

<b>read</b> ( <i>self</i> , <i>fname</i> ) <hr/> Read in header into self.header and the data     into self.data @param fname: input file name @type fname: string Overrides: fabio.fabioimage.fabioimage.read
---

*Inherited from fabio.fabioimage.fabioimage(Section 14.4)*

`__init__()`, `add()`, `getframe()`, `getheader()`, `getmax()`, `getmean()`, `getmin()`, `getstddev()`, `integrate_area()`, `make_slice()`, `next()`, `previous()`, `readheader()`, `rebin()`, `resetvals()`, `toPIL16()`, `update_header()`, `write()`

### ***Inherited from object***

`__delattr__()`, `__format__()`, `__getattr__()`, `__hash__()`, `__new__()`, `__reduce__()`, `__reduce_ex__()`, `__repr__()`, `__setattr__()`, `__sizeof__()`, `__str__()`, `__subclasshook__()`

#### **19.2.2 Properties**

Name	Description
<i>Inherited from object</i>	
<code>__class__</code>	

## 20 Module *fabio.mar345image*

Authors: Henning O. Sorensen & Erik Knudsen  
 Center for Fundamental Research: Metal Structures in Four Dimensions  
 Risoe National Laboratory  
 Frederiksborgvej 399  
 DK-4000 Roskilde  
 email:erik.knudsen@risoe.dk  
 +  
 Jon Wright, ESRF, France

### 20.1 Variables

Name	Description
<code>--package--</code>	<b>Value:</b> 'fabio'

### 20.2 Class *mar345image*

#### 20.2.1 Methods

**read**(*self*, *fname*)

Read a mar345 image

Overrides: *fabio.fabioimage.fabioimage.read*

**write**(*self*)

To be overwritten - write the file

Overrides: *fabio.fabioimage.fabioimage.write* *exitit*(inherited documentation)

*Inherited from *fabio.fabioimage.fabioimage* (Section 14.4)*

`__init__()`, `add()`, `getframe()`, `getheader()`, `getmax()`, `getmean()`, `getmin()`, `getstddev()`, `integrate_area()`, `make_slice()`, `next()`, `previous()`, `readheader()`, `rebin()`, `resetvals()`, `toPIL16()`, `update_header()`

### ***Inherited from object***

`__delattr__()`, `__format__()`, `__getattr__()`, `__hash__()`, `__new__()`, `__reduce__()`, `__reduce_ex__()`, `__repr__()`, `__setattr__()`, `__sizeof__()`, `__str__()`, `__subclasshook__()`

### **20.2.2 Properties**

Name	Description
<i>Inherited from object</i>	
<code>__class__</code>	

Name	Description
<code>--package--</code>	<b>Value:</b> 'fabio'

### 21.3 Class *marccdimage*

Read in data in mar ccd format, also MarMosaic images, including header info

#### 21.3.1 Methods

*Inherited from `fabio.tifimage.tifimage` (Section 26.2)*

`--init--()`, `read()`, `write()`

*Inherited from `fabio.fabioimage.fabioimage` (Section 14.4)*

`add()`, `getframe()`, `getheader()`, `getmax()`, `getmean()`, `getmin()`, `getstddev()`, `integrate_area()`, `make_slice()`, `next()`, `previous()`, `readheader()`, `rebin()`, `resetvals()`, `toPIL16()`, `update_header()`

*Inherited from `object`*

`--delattr--()`, `--format--()`, `--getattribute--()`, `--hash--()`, `--new--()`, `--reduce--()`, `--reduce_ex--()`, `--repr--()`, `--setattr--()`, `--sizeof--()`, `--str--()`, `--subclasshook--()`

#### 21.3.2 Properties

Name	Description
<i>Inherited from <code>object</code></i>	
<code>--class--</code>	

## 22 Module *fabio.openimage*

Authors: Henning O. Sorensen & Erik Knudsen  
 Center for Fundamental Research: Metal Structures in Four Dimensions  
 Risoe National Laboratory  
 Frederiksborgvej 399  
 DK-4000 Roskilde  
 email:henning.sorensen@risoe.dk

mods for fabio by JPW

### 22.1 Functions

<b>do_magic</b> ( <i>byts</i> )
---------------------------------

Try to interpret the bytes starting the file as a magic number
--

<b>openimage</b> ( <i>filename</i> )
--------------------------------------

Try to open an image
----------------------

<b>openheader</b> ( <i>filename</i> )
---------------------------------------

return only the header
------------------------

### 22.2 Variables

Name	Description
MAGIC_NUMBERS	<b>Value:</b> [('FORMAT : 86', 'bruker'), ('MM\x00*', 'tif'), ('...
__package__	<b>Value:</b> 'fabio'

## 23 Module *fabio.pilatusimage*

Authors: Henning O. Sorensen & Erik Knudsen  
 Center for Fundamental Research: Metal Structures in Four Dimensions  
 Risoe National Laboratory  
 Frederiksborgvej 399  
 DK-4000 Roskilde  
 email:henning.sorensen@risoe.dk

+ (mods for fabio) Jon Wright, ESRF  
 marccdimage can read MarCCD and MarMosaic images including header info.

JPW : Use a parser in case of typos (sorry?)

### 23.1 Variables

Name	Description
<code>--package--</code>	<b>Value:</b> 'fabio'

### 23.2 Class *pilatusimage*

Read in Pilatus format, also pilatus images, including header info

#### 23.2.1 Methods

*Inherited from `fabio.tifimage.tifimage` (Section 26.2)*

`__init__()`, `read()`, `write()`

*Inherited from `fabio.fabioimage.fabioimage` (Section 14.4)*

add(), getframe(), getheader(), getmax(), getmean(), getmin(), getstddev(), integrate\_area(), make\_slice(), next(), previous(), readheader(), rebin(), resetvals(), toPIL16(), update\_header()

### ***Inherited from object***

\_\_delattr\_\_(), \_\_format\_\_(), \_\_getattr\_\_(), \_\_hash\_\_(), \_\_new\_\_(), \_\_reduce\_\_(), \_\_reduce\_ex\_\_(), \_\_repr\_\_(), \_\_setattr\_\_(), \_\_sizeof\_\_(), \_\_str\_\_(), \_\_subclasshook\_\_()

### **23.2.2 Properties**

Name	Description
<i>Inherited from object</i>	
__class__	

## 24 Module *fabio.pnmimage*

Authors: Henning O. Sorensen & Erik Knudsen  
 Center for Fundamental Research: Metal Structures in Four Dimensions  
 Risoe National Laboratory  
 Frederiksborgvej 399  
 DK-4000 Roskilde  
 email:henning.sorensen@risoe.dk

### 24.1 Variables

Name	Description
SUBFORMATS	<b>Value:</b> ['P1', 'P2', 'P3', 'P4', 'P5', 'P6', 'P7']
HEADERITEMS	<b>Value:</b> ['SUBFORMAT', 'DIMENSIONS', 'MAXVAL']
P7HEADERITEMS	<b>Value:</b> ['WIDTH', 'HEIGHT', 'DEPTH', 'MAXVAL', 'TUPLTYPE', 'ENDHDR']
<code>__package__</code>	<b>Value:</b> 'fabio'

### 24.2 Class *pnmimage*

#### 24.2.1 Methods

<b><code>__init__</code></b> ( <i>self</i> ) Set up initial values Overrides: <code>object.__init__</code> extit(inherited documentation)
---

```
read(self, fname, verbose=0)
```

To be overridden - fill in self.header and self.data

Overrides: *fabio.fabioimage.fabioimage.read* *exitit*(inherited documentation)

```
P1dec(self, buf, bytecode)
```

```
P4dec(self, buf, bytecode)
```

```
P2dec(self, buf, bytecode)
```

```
P5dec(self, buf, bytecode)
```

```
P3dec(self, buf, bytecode)
```

```
P6dec(self, buf, bytecode)
```

```
P7dec(self, buf, bytecode)
```

```
write(filename)
```

To be overwritten - write the file

Overrides: *fabio.fabioimage.fabioimage.write* *exitit*(inherited documentation)

### ***Inherited from *fabio.fabioimage.fabioimage* (Section 14.4)***

*add*(), *getframe*(), *getheader*(), *getmax*(), *getmean*(), *getmin*(), *getstddev*(), *integrate\_area*(), *make\_slice*(), *next*(), *previous*(), *readheader*(), *rebin*(), *resetvals*(), *toPIL16*(), *update\_header*()

### ***Inherited from object***

*\_\_delattr\_\_*(), *\_\_format\_\_*(), *\_\_getattr\_\_*(), *\_\_hash\_\_*(), *\_\_new\_\_*(), *\_\_reduce\_\_*(), *\_\_reduce\_ex\_\_*(), *\_\_repr\_\_*(), *\_\_setattr\_\_*(), *\_\_sizeof\_\_*(), *\_\_str\_\_*(), *\_\_subclasshook\_\_*()

#### **24.2.2 Properties**

Name	Description
<i>Inherited from object</i>	
<i>__class__</i>	

## 25 Module *fabio.readbytestream*

Reads a bytestream

Authors: Jon Wright      Henning O. Sorensen & Erik Knudsen  
              ESRF                Risoe National Laboratory

### 25.1 Functions

```
readbytestream(fil, offset, x, y, nbytespp, datatype='int', signed='n',  

swap='n', typeout=<type 'numpy.uint16'>)
```

Reads in a bytestream from a file (which may be a string indicating a filename, or an already opened file (should be "rb")) offset is the position (in bytes) where the pixel data start *nbytespp* = number of bytes per pixel type can be int or float (4 bytes pp) or double (8 bytes pp) signed: normally signed data 'y', but 'n' to try to get back the right numbers when unsigned data are converted to signed (python once had no unsigned numeric types.) swap, normally do not bother, but 'y' to swap bytes typeout is the numpy type to output, normally uint16, but more if overflows occurred *x* and *y* are the pixel dimensions

TODO : Read in regions of interest

PLEASE LEAVE THE STRANGE INTERFACE ALONE - IT IS USEFUL  
 FOR THE BRUKER FORMAT

### 25.2 Variables

Name	Description
DATATYPES	<b>Value:</b> {('double', 'y', 4): <type 'numpy.float64'>, ('float', 'y...
__package__	<b>Value:</b> 'fabio'

## 26 Module *fabio.tifimage*

Authors: Henning O. Sorensen & Erik Knudsen  
 Center for Fundamental Research: Metal Structures in Four Dimensions  
 Risoe National Laboratory  
 Frederiksborgvej 399  
 DK-4000 Roskilde  
 email:henning.sorensen@risoe.dk

mods for fabio by JPW

### 26.1 Variables

Name	Description
TIFF_TO_NUMERIC	Value: {'I;16': <type 'numpy.int16'>}
__package__	Value: 'fabio'

### 26.2 Class *tifimage*

**Known Subclasses:** *fabio.marccdimage.marccdimage*, *fabio.pilatusimage.pilatusimage*

Images in TIF format Wraps PIL

#### 26.2.1 Methods

<b>__init__</b> ( <i>self</i> , * <i>args</i> , ** <i>kws</i> ) Tifimage constructor adds an nbits member attribute Overrides: <i>object.__init__</i>
---

<b>read</b> ( <i>self</i> , <i>fname</i> )
--

The fabian read was reading a PIL image We convert this to a numpy array
--

Overrides: <code>fabio.fabioimage.fabioimage.read</code>
--

<b>write</b> ( <i>self</i> , <i>fname</i> )
---

... at least try ...
----------------------

Overrides: <code>fabio.fabioimage.fabioimage.write</code>
---

***Inherited from `fabio.fabioimage.fabioimage` (Section 14.4)***

`add()`, `getframe()`, `getheader()`, `getmax()`, `getmean()`, `getmin()`, `getstddev()`, `integrate_area()`, `make_slice()`, `next()`, `previous()`, `readheader()`, `rebin()`, `resetvals()`, `toPIL16()`, `update_header()`

***Inherited from object***

`__delattr__()`, `__format__()`, `__getattr__()`, `__hash__()`, `__new__()`, `__reduce__()`, `__reduce_ex__()`, `__repr__()`, `__setattr__()`, `__sizeof__()`, `__str__()`, `__subclasshook__()`

### 26.2.2 Properties

Name	Description
<i>Inherited from object</i>	
<code>__class__</code>	

## 27 Module fabio.xsdimage

**Authors:** Jérôme Kieffer, ESRF  
 email:jerome.kieffer@esrf.fr

XSDimage are XML files containing numpy arrays

**Author:** Jérôme Kieffer

**Contact:** jerome.kieffer@esrf.eu

**Copyright:** European Synchrotron Radiation Facility, Grenoble, France

**License:** GPLv3+

### 27.1 Variables

Name	Description
<code>--package--</code>	<b>Value:</b> 'fabio'

### 27.2 Class xsdimage

object

fabio.fabioimage.fabioimage

**fabio.xsdimage.xsdimage**

Read the XSDDataImage XML File data format

### 27.2.1 Methods

**`__init__(self, data=None, header=None, fname=None)`**

Constructor of the class XSDataImage.

**Parameters**

**data:** input data  
*(type=numpy.ndarray)*

**header:** input metadata  
*(type=dict)*

**fname:** the name of the file to open  
*(type=string)*

Overrides: object.\_\_init\_\_

**`read(self, fname)`**

To be overridden - fill in self.header and self.data

Overrides: fabio.fabioimage.fabioimage.read

***Inherited from fabio.fabioimage.fabioimage(Section 14.4)***

add(), getframe(), getheader(), getmax(), getmean(), getmin(), getstddev(), integrate\_area(), make\_slice(), next(), previous(), readheader(), rebin(), resetvals(), toPIL16(), update\_header(), write()

***Inherited from object***

\_\_delattr\_\_(), \_\_format\_\_(), \_\_getattr\_\_(), \_\_hash\_\_(), \_\_new\_\_(), \_\_reduce\_\_(), \_\_reduce\_ex\_\_(), \_\_repr\_\_(), \_\_setattr\_\_(), \_\_sizeof\_\_(), \_\_str\_\_(), \_\_subclasshook\_\_()
